

Accelerate success with Mattermost for Microsoft Teams

Extend your Microsoft environment with a secure digital hub for technical teams

An all-employee messaging solution lacks the automation, customization, and extensibility of an open source platform. When environments are lacking, workflows break and errors occur. Mattermost for Microsoft Teams enables Central IT organizations to provide an extended customization experience for technical and operational teams while staying firmly integrated into the Microsoft 365 all-employee platform.

Connect to specialized systems securely

Mattermost creates a secure collaboration hub where technical users can integrate dozens of role-specific tools, without cluttering the Microsoft Teams all-employee platform.

Bolster business continuity

By providing technical organizations with a resilient collaboration platform independent of and redundant to Microsoft Teams, Mattermost helps to reduce the risk of catastrophic outages and ensures business continuity.

Maintain control and custody of sensitive data

With Mattermost, organizations have complete control and custody of sensitive data and IP in a collaboration system isolated from the primary Microsoft Teams deployment. Conduct audits and reviews of security vulnerability disclosures and other workflows, handling highly sensitive data with complete confidence.

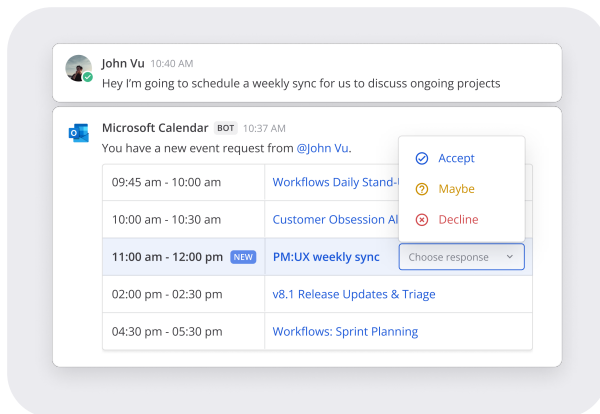

Get more from your Microsoft toolchains with Mattermost

Pre-built Outlook calendar integration

With a two-way integration between Outlook calendar and Mattermost:

- See a daily summary of calendar events
- Sync calendar status automatically into Mattermost
- Accept or decline calendar invites

OneDrive integration for Office 365

Integrated OneDrive experience within Mattermost via Make or Zapier allows you to:

- Automatically upload new files or post messages in Mattermost
- Send notifications for new files & folders uploaded to OneDrive
- Upload and share files in OneDrive

User Management with Azure Active Directory

Set up Azure Active Directory (AD) for user provisioning in Mattermost:

- Sync groups to predefined roles in Mattermost
- Automatically add and remove users from channels based on AD group membership
- Assign team and channel roles to groups
- Manage and delete groups with access to Mattermost
- Use @ mentions to notify users in AD group

SSO with ADFS and Office 365

Manage user provisioning with Active Directory Federated Services (ADFS):

- Enable single sign-on to Mattermost with ADFS credentials
- Automatically federate user identities from ADFS to Mattermost, e.g. full name, email, username
- Automatically provision accounts in Mattermost for new users signing in with ADFS credentials
- Automatically manage admin access to Mattermost with ADFS attributes
- As an added bonus, Mattermost supports Office 365 SSO with support for Microsoft Active Directory Tenants.

Ready to help your technical teams thrive?

Mattermost gives technical and operations teams everything they need to work more productively and collaborate more effectively every day. Request a demo today and see the power of our secure collaboration platform.

Already using Microsoft Teams? You can still have the best environment for everyone by extending Teams with a Mattermost plugin. Check out the repository here: github.com/mattermost/mattermost-plugin-msteams-sync
