Mattermost
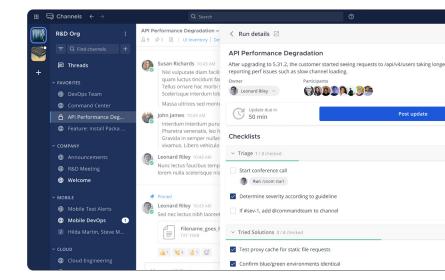

Security Team Operations

Increase resilience with faster detection, response, and remediation workflows with collaboration purpose-built for security operations.

Bring essential security operations into focus with a platform designed for mission-critical work

As the scale and sophistication of cybersecurity threats grow, Mattermost cuts through the noise of everyday team collaboration to accelerate the efficiency of security workflows, improve incident response processes, and integrate with essential tools.

Keep sensitive data secure

Deploy to self-hosted or single-tenant cloud environments for sharing sensitive security information — including raw log files, breach information, and confidential system vulnerabilities — to enable faster, more open discussion and remediation from defenders.

Improve essential security workflows

Bring together your people, processes, assets, and toolchains for mission-critical security operations, product security, and IT security workflows to surface vital information, automate repeated tasks, and enable fast, context-driven decision-making.

Jira Software   GitLab   servicenow   PagerDuty

Accelerate incident response processes

Seamlessly integrate with SIEM systems, threat intelligence platforms, and IT service management tools, leveraging automated alerts and notifications in Mattermost to facilitate quick mobilization of response teams and efficient tracking of incident response activities.

Ensure organizational compliance

Support custom compliance requirements with source code visibility and advanced security features including access controls, data retention, eDiscovery, and legal holds.

How real-time chat helped financial institutions respond to COVID-19

> We're competitors in business but partners in the cybersecurity space, and sharing information only makes us stronger. Mattermost made it a lot easier for us to share information about COVID-19 with each other.
>
> — *FS-ISAC Member*

During a 2021 panel on the global response to the early days of the COVD-19 pandemic, FS-ISAC members shared how the organization's Connect app allowed them to securely share information and collaborate across organizations.

As financial institutions scrambled to shift to remote operations, security leaders turned to each other for advice and support in adapting to a new, distributed environment. The Connect app, powered by Mattermost, provided a secure platform to coordinate online events, ask questions, and share best practices. The platform gave the team a reliable source of information that was easily searchable and secure, ensuring that members were able to prepare their teams for remote work safely and effectively.

Ready to accelerate security operations?

Mattermost gives security teams everything they need to work more productively and collaborate more effectively every day. Request a demo today and see the power of our secure collaboration platform: mattermost.com/request-demo/
