# Mattermost

Unlock Decision Advantage

Secure, Real-Time Collaboration to Power the Army's C2 Next Initiative

Increase operational tempo with secure, real-time collaboration

Military operations face disadvantages when relying on outdated command and control (C2) systems. Operational complexity, outdated proprietary systems, and limited access at the edge hinder mission success. Mattermost provides a secure, customizable collaboration platform that integrates and centralizes data flows for decision-makers.

Why the U.S. Army chooses Mattermost

Seamless integration for Unified Network Operations & C2 Next

Centralize mission-critical information by integrating capabilities, tools, and systems into a flexible command structure. Currently deployed at all impact and classification levels.

Eliminate communication gaps & shadow IT to enhance decision advantage

Unifies secure, real-time communication, solving information silos and reducing swivel-chair tasks. Commanders gain comprehensive situational awareness, improving operational effectiveness.

Trusted at the edge for field operations

Global connectivity at IL4 on mobile devices that reduces physical footprints in C2 operations.

Critical collaboration for joint forces

Message Priority and Acknowledgement, developed with the Air Force, support C2 Next's requirements for secure, actionable communication across joint forces.

How Mattermost Supports Army Command and Control

Agility and Adaptability

Provides a real-time communication and collaboration platform. Air Mobility Command used Mattermost for dynamic adaptation during Mobility Guardian 2023 exercise.

Modularity and Composability

Offers integration capabilities with other tools and systems. Supports OSS integrations like Puckboard for flight crew scheduling and TAK for Mission Ops.

Simplified Architecture

Enables access to critical documents from mobile devices. Securely access documents from anywhere in the world.

Interoperability / Data Integration

Integrates data, tools, and workflows in one centralized platform. Webhooks and integrations pipe data into secure channels with user-based access controls.

Rapid Decision-Making

Facilitates real-time discussions and data-driven decisions. Commanders can review all conversations, feedback, and data from their console.

Secure Communication

Provides self-hosted, on-premises, hybrid, private, and public cloud deployment options.

Mobile Accessibility

Delivers a secure mobile app for field connectivity. Enables soldiers and military staff to stay connected in the field.
