

# Streamline Secure DevOps Workflows

Mattermost transforms the way technical teams in the Department of Defense approach secure software development.

## Dynamic playbooks keep every stakeholder aligned

Build and customize playbooks, automate workflows, and keep executive stakeholders in the loop at every step of the way, whether you're releasing your latest update or responding to an outage.

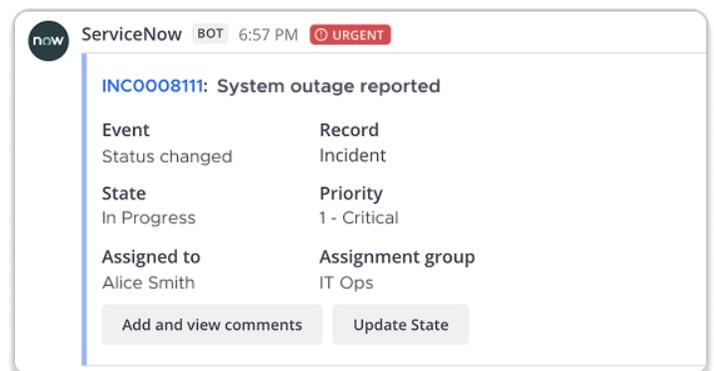

## Customizable integrations to support every toolchain in your stack

From popular SaaS tools to custom government and defense solutions, Mattermost integrates into your workspace to surface critical information from across your workflow.

## The connective tissue for effective software development lifecycle

Empower your team to ship software quickly and effectively while meeting evolving security and compliance requirements. Self-hosted, customizable ChatOps infrastructure streamlines integration across hybrid and in-house tooling and automation.

## Why software development teams trust Mattermost

Mattermost provides a secure, integrated collaboration and workflow automation platform for DevOps in complex environments to ensure critical infrastructure teams can deliver, defend, and operate vital software systems effectively.

### Unmatched security & compliance

Meet DoD Impact Levels 4, 5, and 6 with on-premises deployment options for full control over your data.

### Integrates with DevOps toolsets

Seamlessly connect with DevOps tools like GitLab, Jira, and ServiceNow to streamline your CI/CD pipelines.

### Customizable and extensible

Extend the platform with plugins, custom apps, and open APIs to meet unique project requirements.

### Supports iterative workflows

Use playbooks to capture retrospectives and ensure ongoing optimization of development processes.

Space Force software shop Kobayashi Maru employs agile development to modernize legacy systems that track objects in orbit and develop new warfighter capabilities for the domain. The Kobayashi Maru team uses Mattermost as a definitive knowledge base for the organization, and leverages the platform's plugin framework to integrate critical DevOps tools like GitLab, Jira, and Grafana into a single source of truth.

*"The main thing for us was to protect our data and enable access to our diverse and dispersed workforce... Integrating this connectivity into the development side of our DevSecOps capabilities made the most sense and reduced silos to speed software delivery."*

Anwar Chirakkattil  
Chief Technology Officer at Kobayashi Maru
