

Mattermost Enterprise Advanced

Enhanced secure collaboration and workflow automation for multi-domain secure operations

The highest stakes missions need solutions built to support complex operations. Mattermost Enterprise Advanced is purpose-built to meet the challenges of multi-domain operations at scale, delivering unmatched control over sensitive data in a secure, resilient environment.

Zero Trust by Design

Attribute-Based Access Control (ABAC), Identity-Centric Access Management (ICAM), and need-to-know segmentation for trusted data separation across environments.

Sovereign Data Protection

Built-in data spillage handling, channel classifications, burn-on-read messaging, and post-quantum cryptography for classified and sensitive workloads

AI-Ready Mission-Critical Workflow Automation

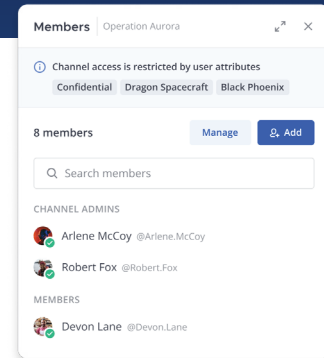

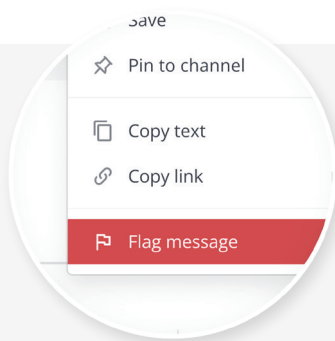

Real-time incident response coordination, cross-domain orchestration, and AI-enabled actions for rapid decision-making under pressure.

Built for Multi-Domain Secure Operations

Enterprise Advanced extends the Mattermost comprehensive messaging collaboration platform providing advanced customization, security controls, and quantum-secure communications aligned with DoD Zero Trust and other security standards.

Control access to classified data

Sophisticated policy-based Zero Trust access controls help organizations achieve dynamic, highly granular access controls.

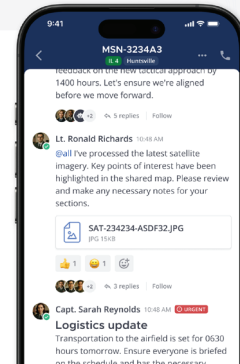

Handle data spillage events effectively

Maintain strong operational security with data leakage flagging to help security teams track and mitigate potential exposure quickly.

Security optimization for mobile

Keep sensitive and CUI materials controlled on mobile devices with advanced controls for BYOD, jailbreak/root protection and biometric authentication.

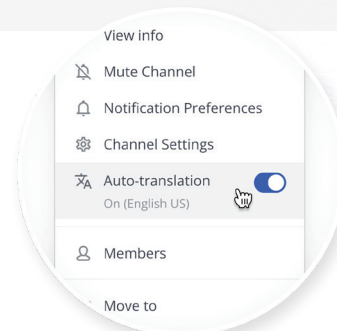

Air-Gapped and DDIL Workflow

Deploy Mattermost in a highly resilient architecture with Shared Channels that ensure that teams stay connected locally even in degraded conditions or air-gapped environments.

Support Mission Partner Environments

Enterprise Advanced is designed to support Mission Partner Environments and cross-domain collaboration with features like Automatic Channel Translation to facilitate faster, more effective information transfer.
