

# Accelerating the Intelligence Lifecycle with Secure, Sovereign Collaboration

## In modern intelligence operations, speed, adaptability, and security determine mission success.

From early detection to actionable resolution, secure, real-time coordination reduces mean time to action from hours to minutes — ensuring faster, better-informed decisions.

Whether countering disinformation campaigns or fusing open and classified sources, Mattermost transforms fragmented communications into structured, mission-ready workflows.

Purpose-built for DDIL and other extreme conditions, it enables intelligence teams to act decisively, adapt in real time, and maintain operational advantage — even in the most contested environments.

## Mattermost: The Nerve Centre of the Intelligence Lifecycle

Mattermost sits at the heart of the intelligence lifecycle, connecting every phase and enabling secure, real-time coordination across agencies, partners, and domains.

# Transforming Threat Intelligence Workflows with Mattermost

From detection to dissemination — accelerating mission-critical intelligence operations at every stage.

## 1. Threat Detection & Validation

Rapidly identify and confirm emerging threats through integrated OSINT and classified feeds. Alerts are enriched with metadata, risk tags, and attribution before being pushed instantly to secure Mattermost channels.

**Outcome:** Analysts move from detection to decision in minutes, not hours.

## 2. Collection & Field Reporting

Field teams and partner agencies securely submit intelligence from the edge — even in DDIL conditions — directly into encrypted, mission-specific workspaces.

**Outcome:** Critical information reaches decision-makers without delay or data loss.

## 3. Processing & Prioritisation

Automated playbooks tag, filter, and route incoming intelligence streams, ensuring only relevant, high-priority data reaches operational teams.

**Outcome:** Reduces analyst cognitive load and accelerates readiness for analysis.

## 4. Collaborative Analysis & Fusion

Multi-agency teams analyse intelligence in secure, structured threads, integrating with fusion platforms and analytical tools.

**Outcome:** Produces richer, multi-source insights faster, improving operational confidence and response accuracy.

## 5. Controlled Dissemination & Feedback

Role-based permissions and audit logging ensure intelligence is shared only with authorised recipients across agencies and coalitions, while embedded feedback loops refine future collection.

**Outcome:** Maintains sovereign data control and ensures intelligence stays actionable, relevant, and secure.

**Reduce mean time to action. Increase operational advantage.**
